

GDBS/SVBS MIDTERM PROJECT OVERVIEW

FULL SAIL
UNIVERSITY
Structure of Game Production

Goal

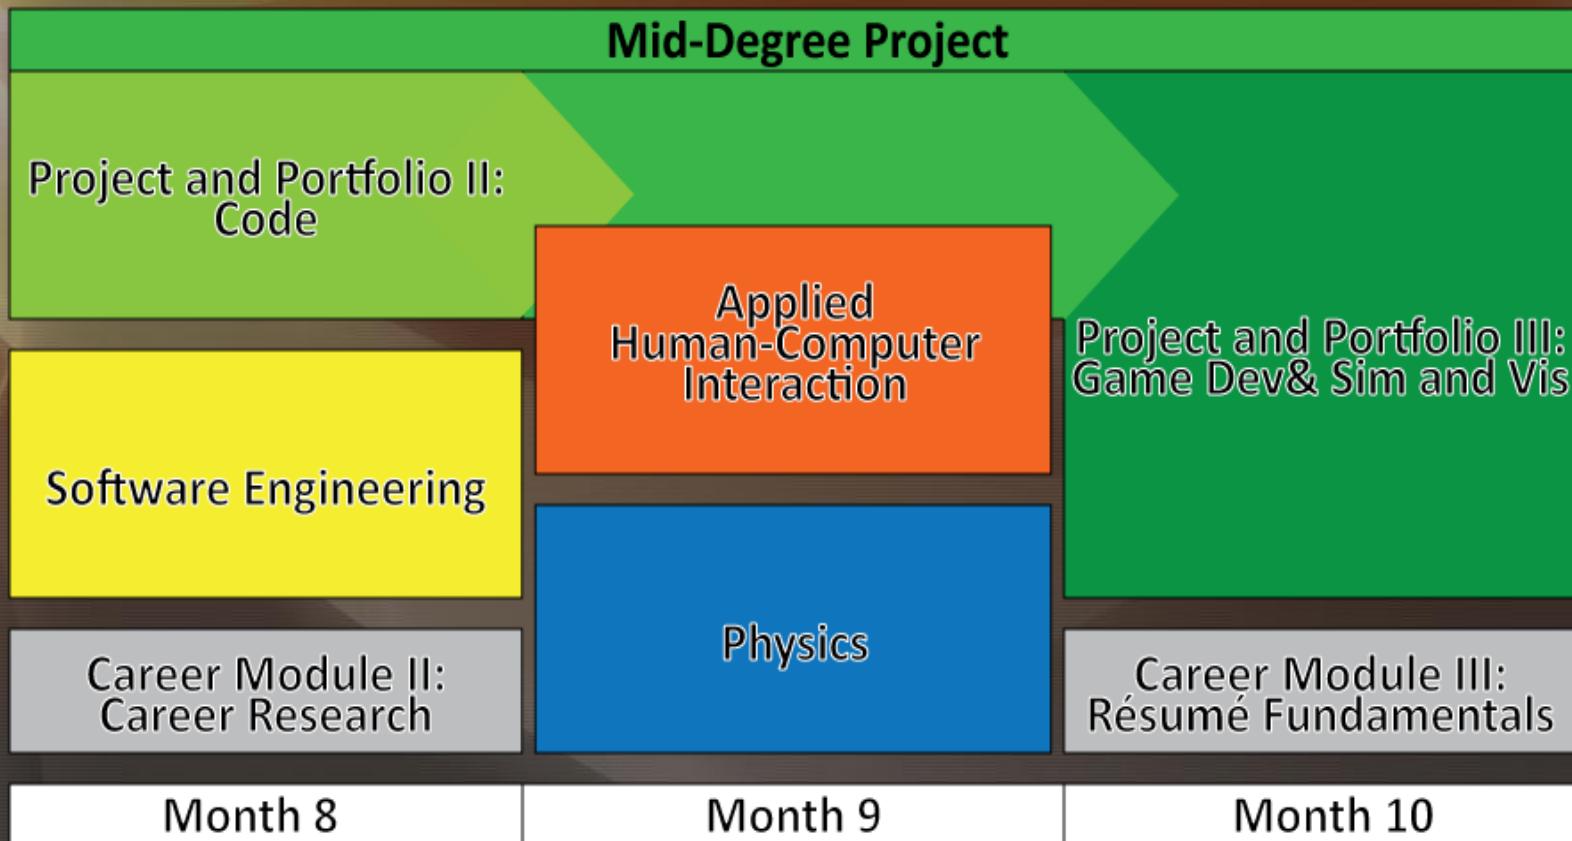

Goal

- ◆ This course is designed to familiarize students with the **development process** by implementing and completing an actual Project.

Overview

Full Project Process

- ◆ 3 month process

Overview

Full Project Process

- Prototyping
 - Paper
 - Digital
 - Post mortem
- Pre Production
 - Design Document
 - Product Backlog
- Core Functionality
 - Hook
 - Input
 - Interface
- Applied AHI Topics
 - Nielsen's heuristics
 - Usability
 - UX
- Alpha
 - Full Functionality
 - Example Content
- Beta
 - Content complete
 - Balancing
- Finalizing
 - QA process
 - Presentation

Expectations

FULL
STRUCTURE
OF GAME PRODUCTION

Expectations: Be a developer

- ◆ Developing
 - Create tech
 - Create content
 - Create and improve the product for our users.

Expectations: Team work

- ◆ Working with each other
 - Not just during Lecture/Lab
 - Outside of class as well
 - At the beginning of each of the 3 months set a schedule for everyone to work TOGETHER.
 - You will always get more done as a group

Expectations: Problem Solving

- ◆ Problem Solving/Researching
 - Put less importance on knowing things ahead of time. You will never have all the answers.
 - On the job, you learn things just-in-time.
 - You have to be able to figure out solutions on your own.

Expectations: Communication

- ◆ Over the next couple months communication will be a challenge.
 - ◆ I will see you 1 or 2 times a week
 - ◆ That isn't enough to keep communication open
- ◆ Keep in contact with us
 - ◆ If something breaks tell us
 - ◆ If there are issues with the art team tell us
 - ◆ If something awesome changes in the project tell us

Project Policies

FULL STACK
UNIVERSITY
Structure of Game Production

Hardware

- ◆ Students are 100% responsible for properly maintaining laptops and other required computing media.
- ◆ Laptop or application failure will not excuse a student from any work or other responsibilities in this class.

Academic dishonesty

"Projects/Assignments: Students are expected to be honest and produce their own projects/assignments according to the specifications of their Course Director. **They must work solely on their projects/assignments unless otherwise noted by this Course Director.** Work submitted by our students is assumed to be a student's own thoughts, idea, and words. Discovery of the contrary will result in immediate consequences. **For group projects, all students whose names are submitted with the project are responsible for the content and will be subject to disciplinary action should plagiarism be discovered."**

...

"Plagiarism Defined (as in Webster's Dictionary):

- 1 to steal and pass off the ideas or words of another as one's own
- 2 use a created production without crediting the source
- 3 to commit literary theft
- 4 **present, as new and original, an idea or product derived from an existing source"**

◆ Student Manual, page 17

Academic dishonesty

- ◆ All functionality in the final product must be created during the open production phases of the project (Core – Beta)
 - Any functionality not included in the unity installation must be authored by a student team member
 - Scripts, prefabs, scenes, or other project functionality included
 - This does apply to your own work from previous classes and projects

Academic dishonesty

- ◆ Assets

- ◆ You may not use the unity asset store to add functionality to the project
- ◆ Students may use assets authored by non student team members as long as they have legal rights to use the assets.
 - ◆ Textures/sprites
 - ◆ Audio/sfx/music
 - ◆ Models/meshes
 - ◆ Animations
- ◆ Any assets used that was not created by a student team member must be have their source credited in the game's credits

Academic dishonesty

- ◆ Cooperation
- ◆ Students are encouraged to work together to solve problems
 - Peer programming encouraged
 - Whiteboard discussions encouraged
 - Teams helping other teams encouraged

Academic dishonesty

- ◆ Student must complete tasks that are assigned to them
 - ◆ Tasks can be transferred from one student to another, however producer approval is needed and work must be replaced

Rules every project must follow

- ◆ There is a list of rules that all projects must follow
 - ◆ GDBS SVBS Midterm Project TRC
 - ◆ Details in PP3
- ◆ Things to know in advance
 - ◆ Must be at least one single player mode
 - ◆ Project will have to eventually support either touch based devices or web player
 - ◆ Total memory footprint of the game must be less than 256MB

Tools

FULL
STRUCTURE
UNIVERSITY
Structure of Game Production

Tools

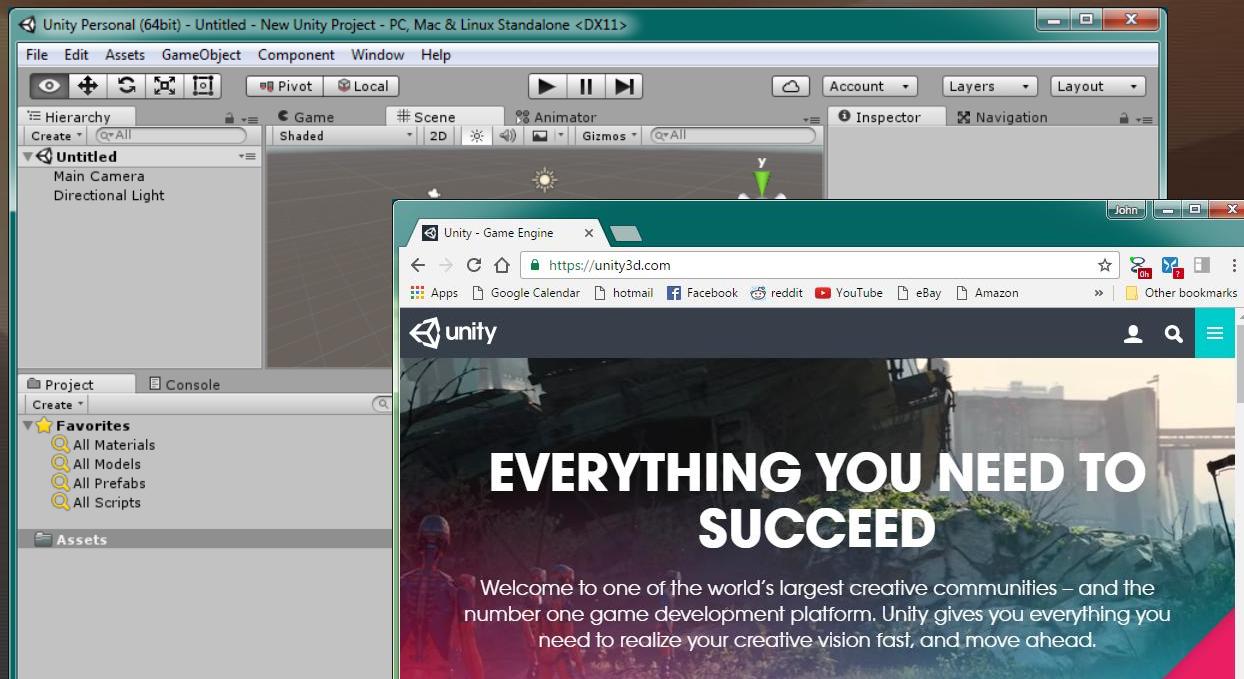

Overview

- ◆ Things we will be using throughout the project months
 - ◆ Unity
 - ◆ Skype
 - ◆ Chrome
 - ◆ Trello (with plus for trello plugin)
 - ◆ TortoiseGit
 - ◆ underdog

Tools

Unity

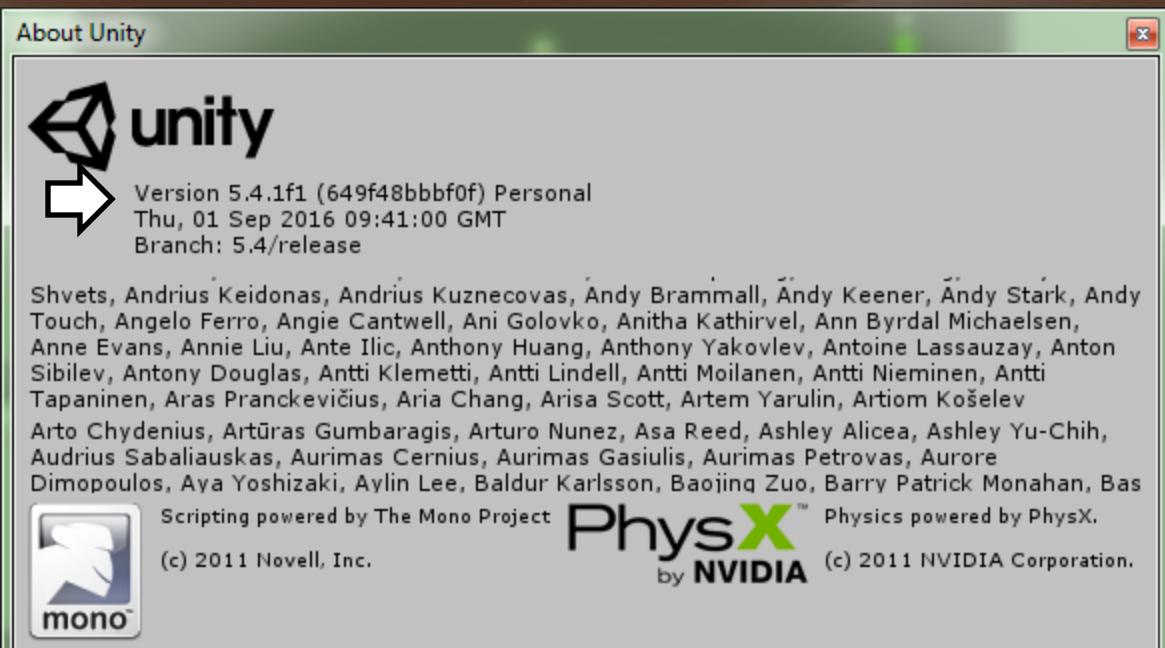

- ◆ Our dev environment
- ◆ Coding in c#
- ◆ unity3d.com

Tools

Unity

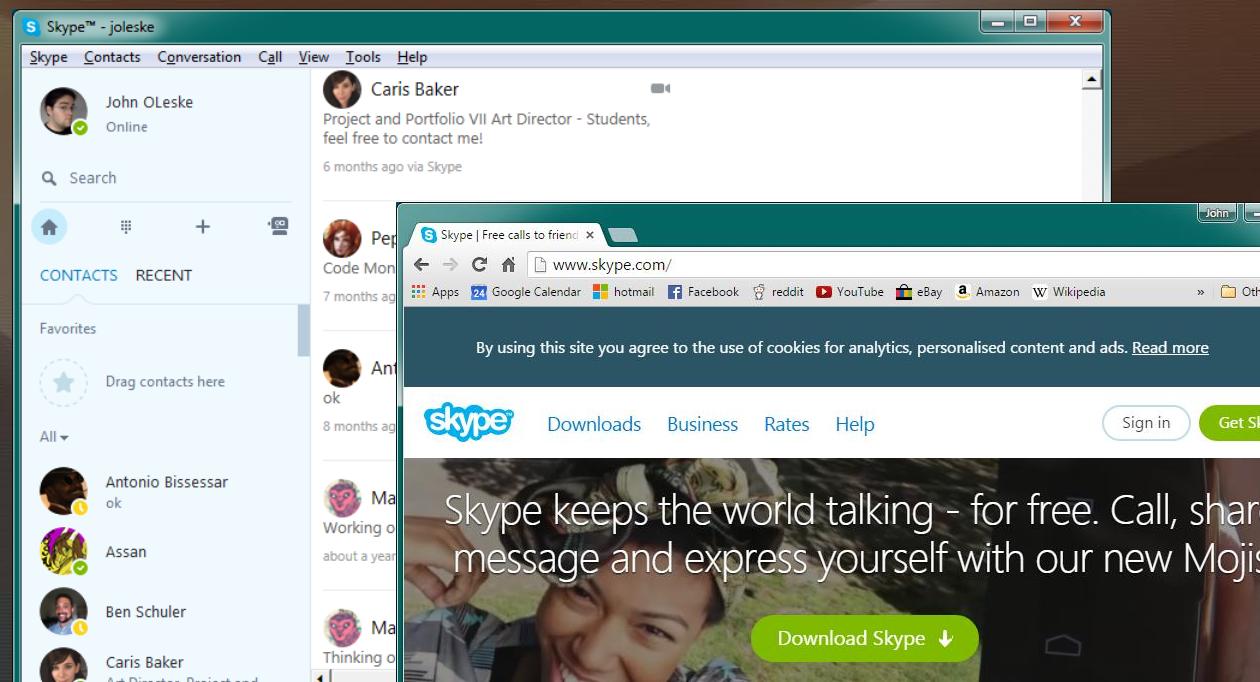

- ◆ Make sure everyone is running the same version

Tools

Skype

- ◆ Help the team keep communication open while working remotely
- ◆ Direct line of communication with CD and APs

Chrome

- ◆ Needed for a plug in we will be using

Tools

Trello

- ◆ This will be both our design space and our task management system
- ◆ trello.com

The image displays two side-by-side screenshots of the Trello web application. The left screenshot shows the 'Personal Boards' section, featuring two boards: 'Midterm Project Tasks' and 'New Midterm Project Tasks'. Below these boards is a 'Week by user' chart showing tasks assigned to various users over a week. The right screenshot shows the main Trello homepage, which includes a banner with the text 'Trello lets you work more collaboratively and get more done.' and a brief description of how Trello's boards, lists, and cards enable users to organize and prioritize their projects.

Tools

Trello (with plus for trello plugin)

- ◆ Will need chrome for plus for trello plug in
- ◆ plusfortrello.com

The image displays a desktop environment with two open browser windows and a Chrome extension dialog.

Left Window: Shows the "Plus for Trello Help" page. It includes a "Language" dropdown set to "English", a "Enable or disable Plus" section with a checkbox for "Disable changing trello.com pages", and a list of features: "Card's time spent per list", "Mobile iOS/Android app features", "Track unanswered card comments sent or received", and "Board flowcharts for task count or time per list".

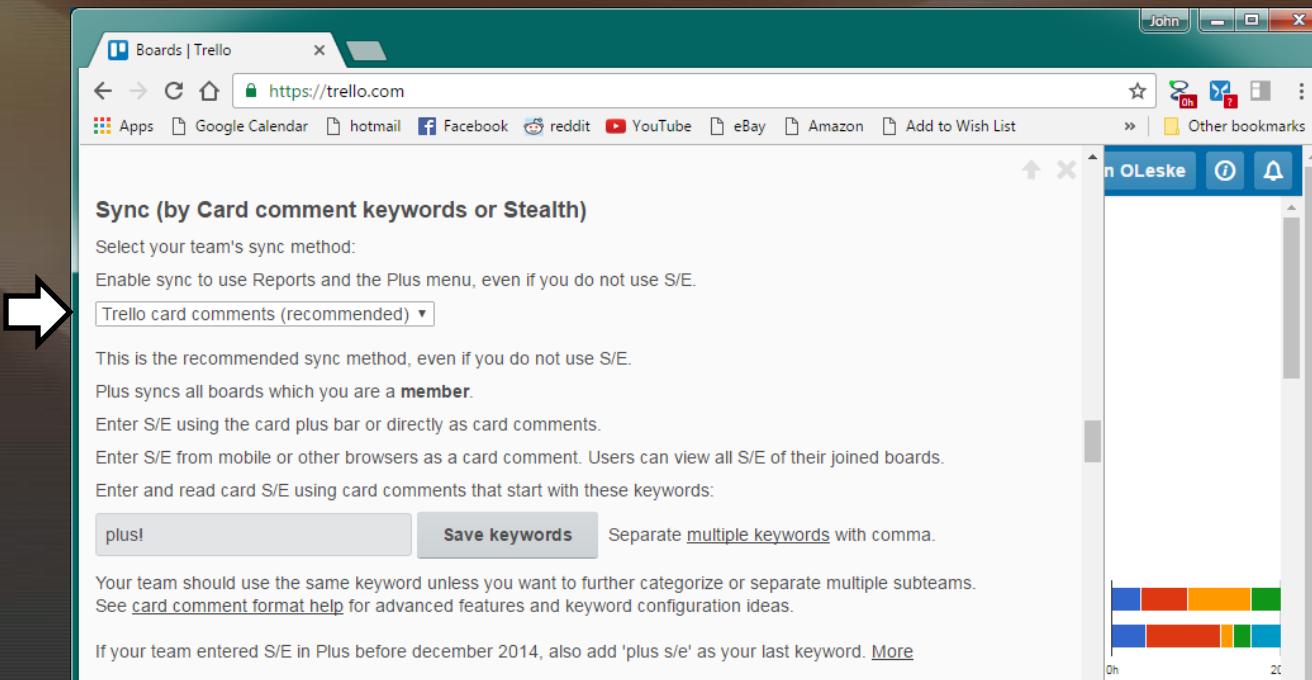

Right Window: Shows the "Plus for Trello About" page. It highlights "Free • no ads • open source" and lists the extension's capabilities: "Read and change your data on trello.com and www.googleapis.com".

Chrome Extension Dialog: A modal window titled "Add 'Plus for Trello (time track, reports, scrum)'?" is displayed. It shows a 5-star rating with 374 reviews, 44,182 users, and a "View details" link. Below the dialog, there are "About" and "Add extension" buttons, along with a "Cancel" button.

Tools

Trello (with plus for trello plugin)

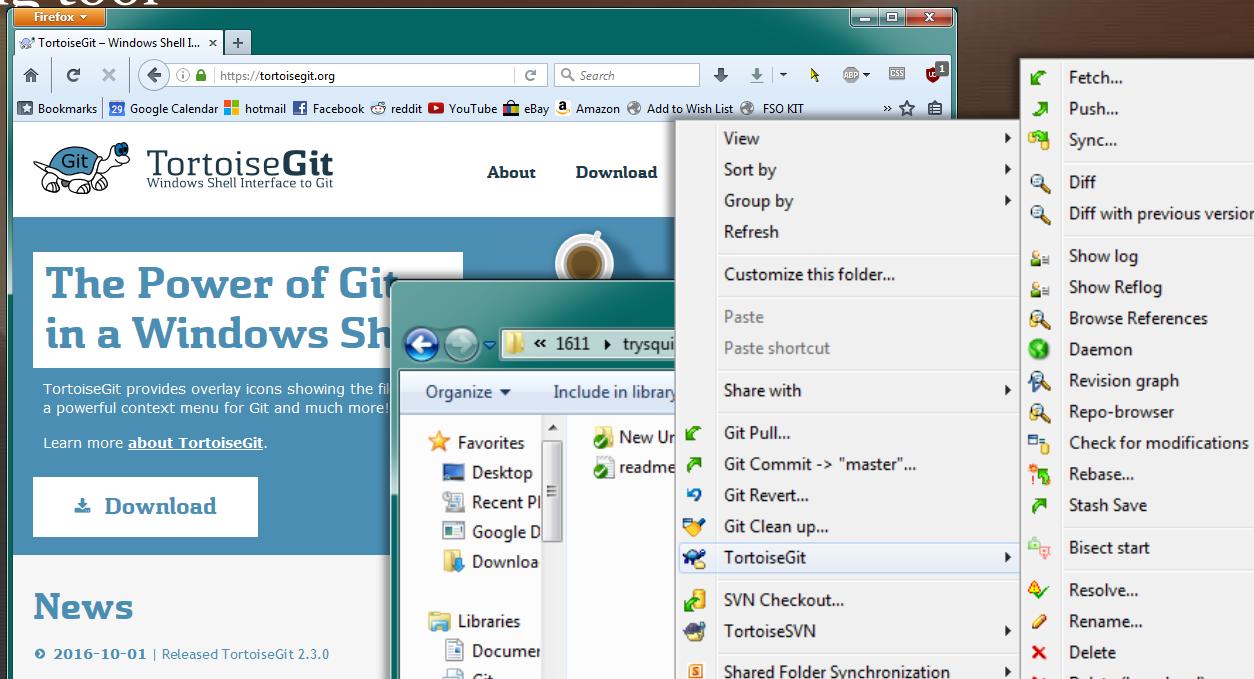

- ◆ “Sync method” must be set to “Trello card comments”

Tools

TortoiseGit

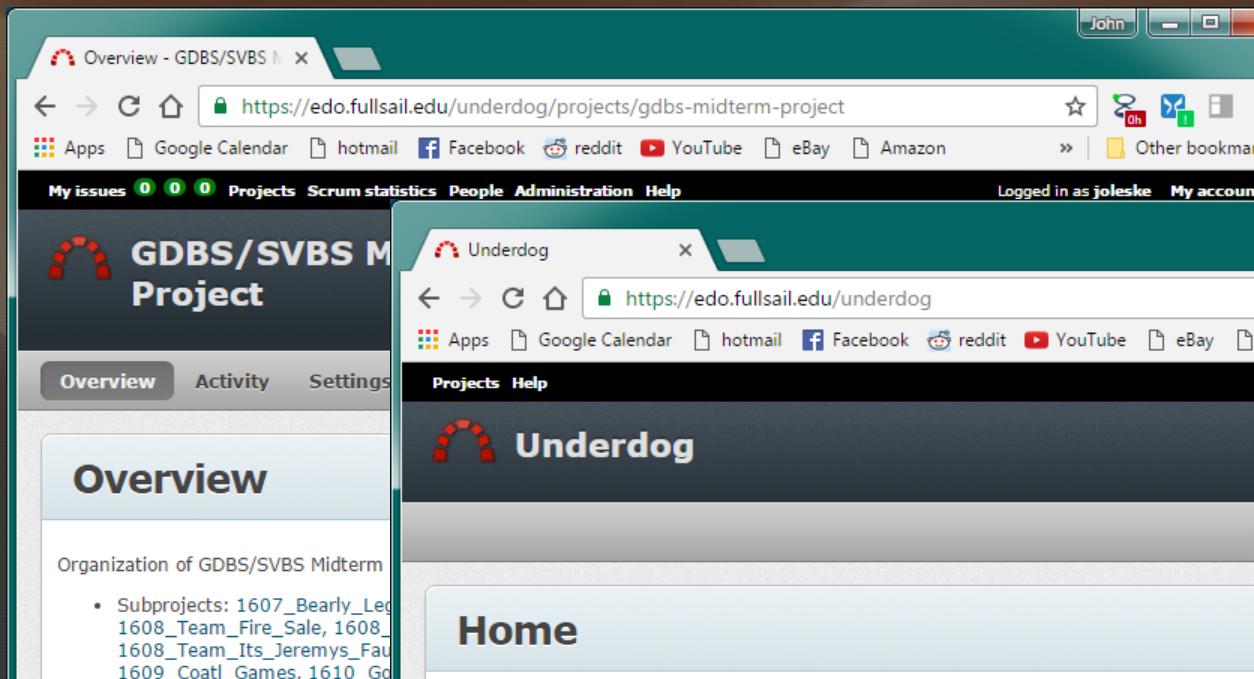

- ◆ We will be using git for our versioning system
- ◆ Git server will be provided with underdog
 - ◆ Allows for versioning when not on campus
 - ◆ Uses same credentials used for sidekick
- ◆ TortoiseGit client allows the use of unity's git merging tool

Tools

TortoiseGit

- ◆ Underdog is our hosting method
- ◆ edo.fullsail.edu/underdog

Activities

FULL
STRUCTURE
OF GAME PRODUCTION

Activities

Form teams

- ◆ Teams should be 3-5 students (4 preferred)

Tools

Class Activity

- ◆ Collect team account information
 - ◆ Need the contact sheet filled out for every team

Team Name			
The team			
Trello Username*	Underdog Username	Skype Username	Real Name* (Last name, First name)

Activities

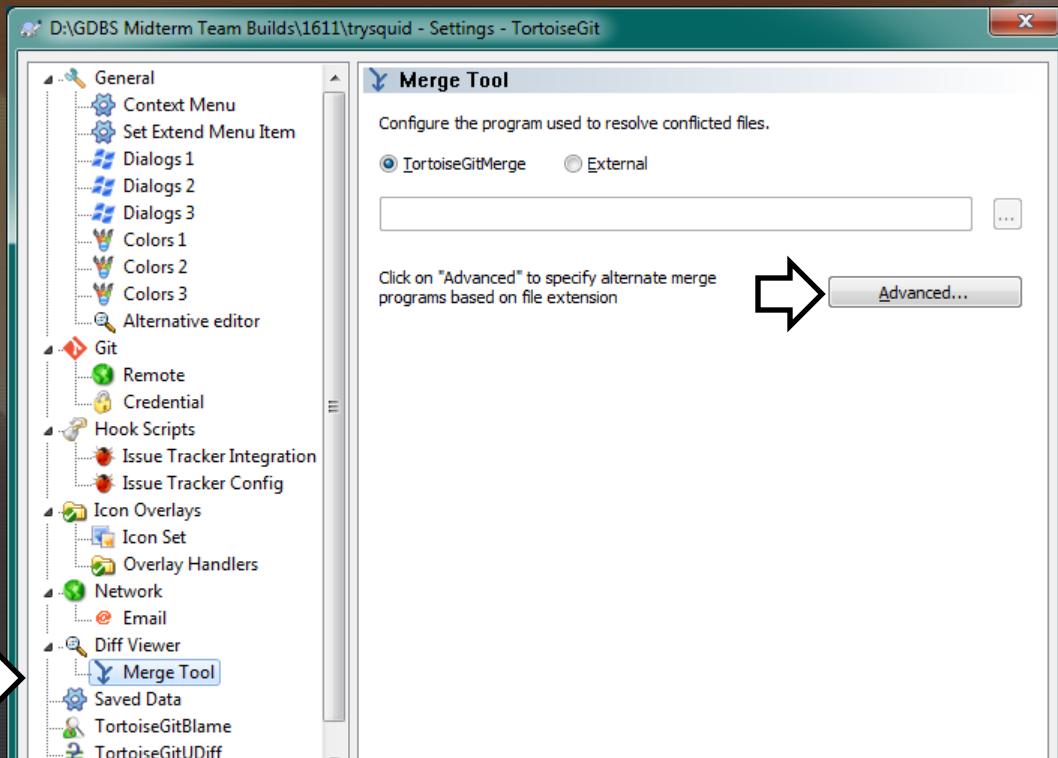

Create trello boards

- ◆ Create Trello boards for teams
- ◆ Trello basics
 - ◆ We will be putting our design on Trello
 - ◆ Fill in the given design topics
 - ◆ Create new cards each time anyone thinks of a feature

Version Control

Set up Git

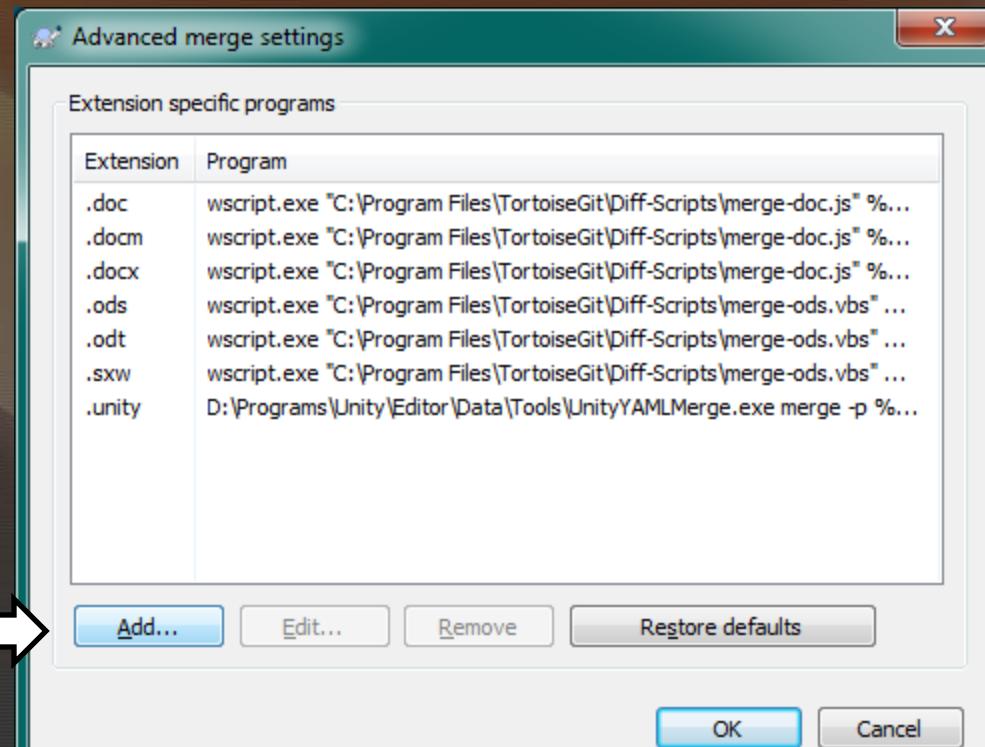

- ◆ Version control setup
 - Set up git for unity
 - SmartMerge:
<https://docs.unity3d.com/Manual/SmartMerge.html>

Version Control

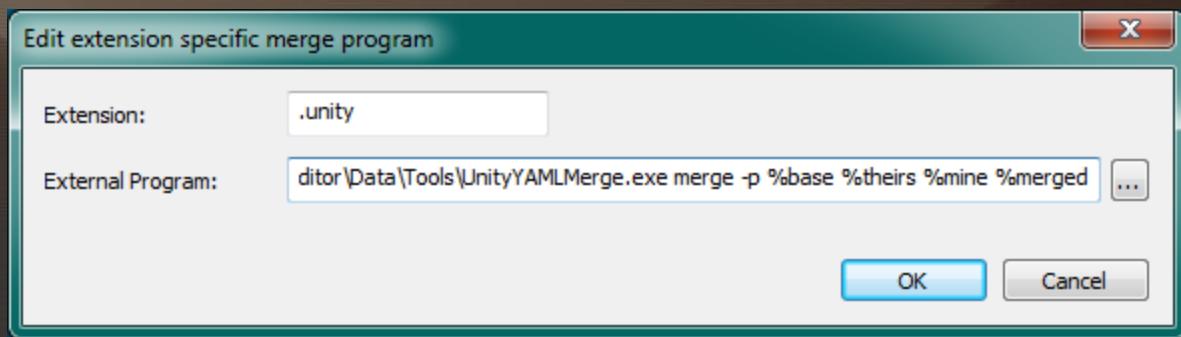

Set up Git

- ◆ Version control setup
 - Set up git for unity
 - SmartMerge:
<https://docs.unity3d.com/Manual/SmartMerge.html>

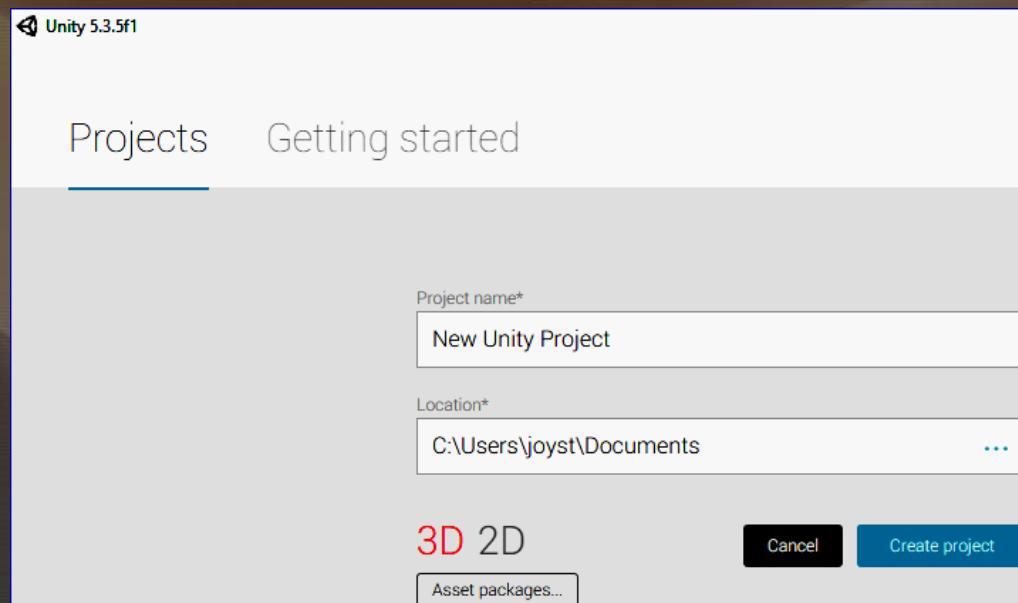

Set up Git

- ◆ Version control setup
 - Set up git for unity
 - SmartMerge:
<https://docs.unity3d.com/Manual/SmartMerge.html>
 - Extension = .unity
 - External Program =
`<Unity install location>\Editor\Data\Tools\UnityYAMLMerge.exe merge -p %base %theirs %mine %merged`

Create bare project

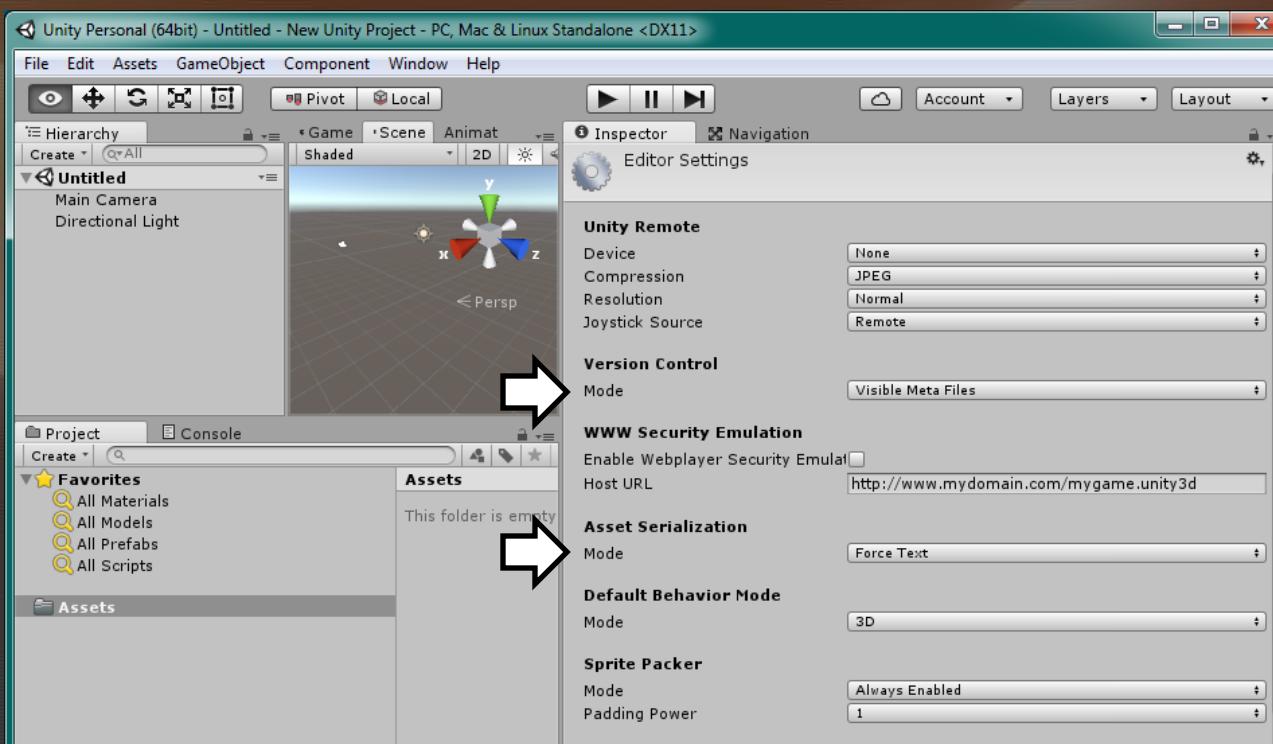

- ◆ 1 person on each team will create a bare project

Version Control

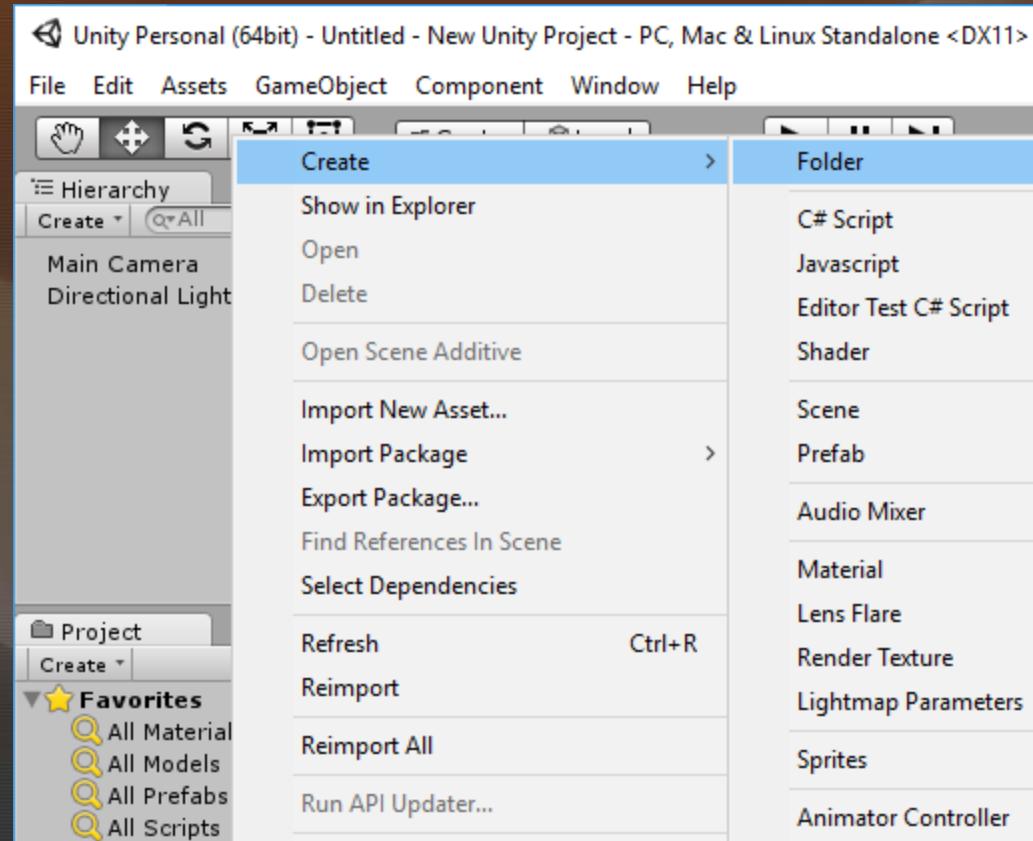

Set up version control in unity

- ◆ Version control setup
 - Create bare unity project
 - Set up version control (Visible meta files) and serialization mode (Force Text)

Create folder hierarchy

- ◆ Set up base hierarchy
 - Scripts
 - Prefabs
 - Scenes
 - Textures
 - Models

First Git push

- ◆ Add all the files and folders
 - ◆ Git ignores empty folders, at least 1 file must be in each folder for the folder to be pushed to the repo.
- ◆ Commit the changes
- ◆ Push to remote server
- ◆ Team members all pull and confirm we have the same build

Good for now
